Klugier wrote on Fri, 22 January 2021 20:24Hello,

I try to build TheIDE with embeeded umk that works. I just noticed that "/opt/local/include" doesn't exist and "/usr/include" doesn't posses openssl. So, I modified CLANG.bm to provied valid path:

```
INCLUDE = "/usr/include;/usr/local/opt/openssl/include";
```

And the compilation works...

The openssl is install using brew:

```
brew install openssl
```

The same is true for library path and it needs to be change to posses openssl:

```
LIB = "/usr/lib;/usr/local/opt/openssl/lib";
```

And now TheIDE works on macOS. I highly suggest to update CLANG.bm for mac to above options and trigger new build for that system.

Klugier

Well, I actually suspect that the whole issue is a result of brew upgrading openssl to 1.1...
