bool InsertDocument(ValueMap * header, vector<vm*> * rows){

 Sql query_header(my_mssql_db);
 query_header.ClearError();

 Sql query_body(my_mssql_db);
 query_body.ClearError();

 query_header.Begin();
 query_body.Begin();

This is really quite ugly code: Transaction is associated with SqlSession, so the second begin
starts the second level.

I agree :roll: it was one desperate attempt, at the end I removed the "double" session...
