I think the parser should first check for the upphub markers/sentinels (UPPHUB_BEGIN,
UPPHUB_END), if the file is not marked explicitly as json.

Thanks! Good idea. :blush:
There is still a bug in this JSON file:
    "readme": "https://raw.githubusercontent.com/mirek-fidler/gdal/master/README.md"
  }
  }

(an extra curly brace ...)
