Subject: Re: Patch to fix few possible issues
Posted by koldo on Wed, 03 Feb 2021 08:22:30 GMT

After reviewing both:

- flawfinder gives generic advices, e.g., if it finds a system() call, it advices to replace it with the specific OS function. Not bad, but generic
- cppcheck seems to really check the sources in detail, giving very specific advices

So cppcheck, although it sometimes fails, seems more useful.
