SysInfo is maintained and tested daily. Please tell me in what environment you have that error
and I will solve it.

I've just opened "bazaar/SysInfo_demo_gui", then compiled it (Execute button) on the freshly
installed Upp TheIDE Version 15260 (CLANGx64 Debug).

My System:
Edition Windows 10 Pro
Version 20H2
Build 19042.746
Feature Experience Pack 120.2212.551.0

It throws me over 20 errors, one of it is the one with "mt19937".

Best Regards, Daniel

Dear dschoni

Reading the error list I find that:
- Although SysInfo calls Bazaar/Functions4U, it seems that your compiler cannot find
Functions4U.h
- The line numbers of the errors in SysInfo.h don't match with the lines in the actual code

In summary, it may be that you are using and old version of SysInfo, and you do not have
Functions4U in your sources. Please tell me from where you have installed Bazaar (SVN,
UppHub, nightly builds).

Thank you for your report.
