Hi,

Terminal package and TerminalCtrl is moved to its own repo and UppHub. (It will continue to be available on upp-components too.)

This means that you no longer need to download the whole repo to get TerminalCtrl and its reference examples.

If you have U++ nightly builds (as of February 12), you can download them via UppHub package manager in the TheIDE.

If you have any questions let me know.

Best regards,
Oblivion
