Hi,

in source code this work fine to me:

```
if(multi_select || !select_row)
{
    //when MultiSelect is set to false, it will not display a selection menu.
    // otherwise it will display the menu and the selection of multiple records. In this
situation,
    // the issue of copies of records must still be properly configured.
    if(multi_select)
        SelectMenu(bar);

    isitem = true;
}
```

Thanks!
