Subject: UppHub - automatic dependency installation

Hello Mirek,

I would like to ask one important question related to UppHub. If I checkout project that uses some UppHub packages that I do not posses at the moment. Does the build system downloads it from me. Let's assume I have following project.

- MyApp
  - Controls4U
  - GoogleTest

When I press build on TheIDE will Controls4U, Functions4U will be downloaded during the build or I need to explicitly go to UppHub and find each dependency and download it separately?
