A small tip:

TerminalCtrl can display PowerLine fonts and glyphs
By default, however, if you install and try to use PowerLine fonts, you will notice that some glyphs are missing. This is because U++ handles its fallback fonts through a compile-time list.
In order to utilize powerline fonts, all you need to do is add the following line to the end of fallback fonts lists [sFontReplacements array], in Draw/FontCR.cpp:

{ "PowerlineSymbols", 0x00000000, 0x08000008 },

This method can be applied to other fonts as well. Just use uppbox/FontCover app to calculate the font range for your desired font.

If you recompile U++, set up powerline fonts support and configure apps, say vim, you should get a display similar to the below screenshot(taken via stock TerminalLayoutExample):

Best regards,
Oblivion
