Thanks to all for trying to help :)

Quote:Is not it possible that Control4U is the first yellow line?

Mirek, please see the screenshot below showing that no Control4U is visible in the repository.

Quote:Could you remove UppHub directory completely and try to download Controls4U one more time. You can find directory path in settings

Klugier, I deleted the uppHub directory in my Upp installation. Then I reinstalled the Control4U package from the starting splashscreen and the same problem happened. :(

Here is the structure of my uppHub

Quote:I had encountered a seemingly similar problem when I first tested Upphub/Controls4u. In my case the culprit was the "bazaar assembly" itself.

The problem was solved after I'd removed the bazaar entry from the assemblies section in the main package selection screen.

Oblivion, I did not have a bazaar entry in the assemblies section as shown below.

So I have no idea of what is happening as other packages, except Control4U/SysExec are correctly installed

Thank you for more advices
