mt dew3q wrote on Tue, 15 October 2019 02:47Am I doing something wrong with this code?
Is there a trick for joining SQLite tables?

```
Sql sql(sqlite3);
Select(id.Of(a), mytext.Of(b))
.From(a)
.InnerJoin(b)
.On(id.Of(a) == fk_A.Of(b))
.Where(id.Of(a) == 2);
while(sql.Fetch())
    Cout() << sql[0] << ' ' << sql[1] << '\n' ;
```

//Error: Schema join not found ,a, b (if I used a reference join syntax instead of plain old join)

it was just an example of unattentiveness while reading SQL Tutorial

- just need to use cursor "sql*" to get then records from recordset while fetching

```
Sql sql(sqlite3);
sql * Select(id.Of(a), mytext.Of(b))
.From(a)
.InnerJoin(b)
.On(id.Of(a) == fk_A.Of(b))
.Where(id.Of(a) == 2);
```

the code of topic_starter is working...
