Hello,

After reading the UppHub instructions here

[https://www.ultimatepp.org/app\\$ide\\$UppHub\\_en-us.html](https://www.ultimatepp.org/app$ide$UppHub_en-us.html), It says all packages have to be root or in Plugin directory

I would like to have a directory in which all addons specific to my package would be grouped (instead of being mixed with all others in the plugin directory).

This enhances readability a lot

Is there a real reason for restriction about Plugin directory ?
