OK, now I checked LeftDouble(), RightDouble(), RightUp()... and NONE of them works with the above code.

Need to think more...

Best regards,

Tom

EDIT: I'm starting to believe that if WM_POINTER* is used for mouse, it needs processing WM_POINTERUP and WM_POINTERDOWN in a way that checks IS_POINTER_FIRSTBUTTON_WPARAM(wParam), IS_POINTER_SECONDBUTTON_WPARAM(wParam) and so on to detect WM_LBUTTONUP/DOWN and WM_RBUTTONUP/DOWN and others correctly. Seems a bit complex to me. And still DOUBLECLICKs are a mystery.
