Hi,

News: Wacom works on Linux Mint out of the box on real hardware. Right from login screen!! :)

On LM, the barrel button generally seems to work like the right mouse button.

State of U++ support for Wacom:

+ Pressure works
? Tilt with non-tilt-supporting hardware reports around 0.007 on both axis
- barrel button is not detected at all

Processing the history on linux seems even more important than with Windows. The drawing output is very coarse.

Best regards,

Tom
