lectus wrote on Fri, 06 October 2006 18:39I was using the Mingw that comes with U++.

I'm now using VC++ 2005 Express (couldn't find my VC++ 2003 Toolkit), and I installed just the command line compiler with the Platform SDK (without IDE).

I couldn't use BLITZ and the compilation was slower than Mingw with BLITZ.

Both is really strange. Might be those 256MB.

If I have a time, I will check with my old 256MB machine.

Mirek
