Hi, I have a MacMini M1 Arm64 with BigSur 11.2.2 and I'm trying to compile the sound example.
The computer says to me: fatal error soundcard not found!! the line is this on the code: # include <sys/soundcard.h>
But I have a sound card inside my mac mini....What's the problem??
Most Other examples work Fine!!

Thank you a lot in advance, best regards, Lestroso.
