Tom1 wrote on Sat, 27 March 2021 20:45Yes. Widgets mostly work. Some flickering with e.g. Menu, but I think nothing is severely broken. I can do a more thorough check later.

Breaking out from WM_POINTER* instead of return 0L; does not have any effect on this test with RectTracker. Offset remains.

The core problem in my opinion is ::GetCursorPos which does not work with pen. This comes evident with drags.

OK. In the new commit I treat GetCursorPos as "not reliable", overriding it with position got from lParam.

Can you try?
