Novo wrote on Mon, 29 March 2021 21:48: Is it possible to make extern char Argv0__[] publicly visible?

I need it to initialize third-party code in a way similar to the way gtk_init is doing this.

TIA

Just to be sure: You need the value of argv[0] of main, right? (the name of app)

Something like

String GetArgv0();

(things are complicated as Argv0 is POSIX specific...)
