Please, try the following code.

String qtf;

QtfRichObject

PNGpict(RichObject("image",StoreImageAsString(StreamRaster::LoadFileAny("c:/msg\_about.png "))));

QtfRichObject

GIFpict(RichObject("image",StoreImageAsString(StreamRaster::LoadFileAny("c:/msg\_about.gif")));

```
qtf << "[A6 The PNG image looks well: " << PNGpict << "]&"; qtf << "[A6 The GIF image looks tiny: " << GIFpict << "]&";
```

PromptOK(qtf);

You will see that PNG image is OK, but the GIF image is only 2 pixels in height. What's the reason of this?

I used the follwing GIF: http://www.arilect.com/upp/forum/theme/default/images/msg\_ab out.gif

The PNG file was created with MS Paint.
