Hello BetoValle,

```
for(int i = 32; i < 128; ++i) {  
    Cout() << "\t0x" << FormatIntHex(i, 2)  
        << "\t0x" << FormatIntHex(i + 1, 2)  
        << "\t0x" << FormatIntHex(i ^ (i + 1), 2) << "\n";  
}
```

// OR

```
Cout() << "\t-----\n";
```

```
for(int i = 32; i < 128; ++i) {  
    Cout() << Format("\t0x%02x\t0x%02x\t0x%02x\n", i, i + 1, i ^ (i + 1));  
}
```

Something like this?

You can use text formatting and/or formatters, as you can see in the above example.

Best regards,
Oblivion
