Hello James,

Sorry I didn't have time to send the example but I found some time this after-noon ;)

At first I thought the styling would be the same as for buttons ... but it's not the case.
In the included small example, I just modified the radius of the EditString.
Note that there two different ways to do it (and shown in the example):
   * modify the default EditString syle (which is in fact the default style for ALL EditField classes
   * Make a specific style and set it to the desired EditStrings

It's up to you to set the colors the way you wan't ;)
