
Subject: QTF Centered in ArrayCtrl header

Hi,

this line

```
kCtrl.AddColumn(t_("\1[G1= Service&class]")).Margin(0).NoEdit().HeaderTab();
```

Should add a centered text inside a ArrayCtrl column header... it used to work last time I compiled my application; now it doesn't and displays a blank line.

Something is happening, because if I change text size (example G6) it does increase the cell, but the content is blank.

If I remove the '=' :

```
kCtrl.AddColumn(t_("\1[G1 Service&class]")).Margin(0).NoEdit().HeaderTab();
```

it works, but of course the text is left-justified.

It's a bug or am I missing something ?

EDIT: I tested also with < (left align) and it works; > (right align) doesn't. It seems that the cell width is wrong when calculating text position.

EDIT2:

Modifying the code as:

```
kCtrl.AddColumn(t_("\1[G1  
Service&class]")).Margin(0).NoEdit().HeaderTab().SetAlign(ALIGN_CENTER);
```

(so, remove the '=' and add SetAlign() call) the text is 'centered', i.e. the first line ('Service') is centered

but the second is left aligned with 'Service' word:

First word
Second

and not

First word
second
