Quote:Any suggestions? IMO this is bad but sort of acceptable... Or maybe it is possible to switch something back at the end of debug session?

Well, this turned out to be a problem on my side (or on GNOME with default wayland, where X11 conf in /etc is not really configured.): The keymap for x11 was unset. so I have "fixed" this by using "localectl" to create the keymap conf in etc with my preferred keymap (tr,tr). Now it works as expected.

Best regards,  
Oblivion
