Hi,

I tried a fresh install of 2021.1 rc (15939), but it froze for several minutes on first startup showing progress 'Working: Search engines setup'. This is likely caused by my development computer not having an internet connection most of the time. Would it be possible to remove this requirement for internet connection from TheIDE? E.g. setup the search engines only on first search or something...?

I did not have this issue when recently installing 15931.

Best regards,

Tom
