Tom1 wrote on Mon, 03 May 2021 09:51Hi,

I tried a fresh install of 15940, but it froze for several minutes on first startup showing progress 'Working: Search engines setup'. I did not have this issue when installing 15931. This is likely caused by my development computer not having an internet connection most of the time. Would it be possible to remove this requirement for internet connection from TheIDE? E.g. setup the search engines only on first use...?

Best regards,

Tom

Good catch, thank you.
