Hi,

I did a test by uploading a pdf file to a variable string and then saved it to mysql. Then I read the content for string, and saved it as a pdf. The result was totally incorrect. How can I do this considering pdf, binary and image files?

```
String pdf="file.pdf";
String bf ="file.exe";
String if ="file.png";

//how to load Files to save in mysql?;

sql.Begin();
String st="INSERT INTO test ";
st += "(PDF,BF,IF)";
st += " values (?,?,?)";
sql.Execute ( , , );
sql.Commit();

String st="select * from test ";
sql.Execute (st);
while ( sql.Fetch() )
{
   ? SQL["PDF"]
   ? SQL["BF"]
   ? SQL["IF"]
 }

//how to write content in files ?
  SaveFile(fpdf,?);
  SaveFile(fbf,?);
  SaveFile(fif,?);
```

Thanks!
