Hi,

I did a test by uploading a pdf file to a variable string and then saved it to mysql. Then I read the content for string, and saved it as a pdf. The result was totally incorrect. How can I do this considering pdf, binary and image files?

```
String pdf="file.pdf";  
String bf ="file.exe";  
String if ="file.png";
```

```
//how to load Files to save in mysql?;
```

```
sql.Begin();  
String st="INSERT INTO test ";  
st += "(PDF,BF,IF)";  
st += " values (?, ?, ?)";  
sql.Execute ( , , );  
sql.Commit();
```

```
String st="select * from test ";  
sql.Execute (st);  
while ( sql.Fetch() )  
{  
    ? SQL["PDF"]  
    ? SQL["BF"]  
    ? SQL["IF"]  
}
```

```
//how to write content in files ?
```

```
SaveFile(fpdf, ?);  
SaveFile(fbf, ?);  
SaveFile(fif, ?);
```

Thanks!
