Subject: "Do not show again" variants of U++ message boxes

All prompts now got "Opt" and "Opt1" variants, e.g.

PromptYesNoOpt1(const char *qtf, const char *opt_id = NULL);

These variant present "Do not show again" checkbox.

If checked and the Opt dialog is invoked again with the same opt_id, then the same value as the last time is returned withou showing the dialog.

Opt1 does this only if user selects button that returns 1 (e.g. Yes) - this is because sometimes it would be pretty confusing that some operation with "do you want to continue" prompt would be blocked forever...

If opt_id is not specified (NULL), it is created by hashing the message text.

Functions

void ClearPromptOptHistory();
void ClearPromptOptHistory(Gate<String> filter);

make prompts "forget" the checkbox while

void SerializePromptOptHistory(Stream& s);

serializes the settings.
