Hello Novo,

I can't reproduce the error on Linux or on Windows and unfortunately I don't have a Mac to test it. However, the problem seems to be the conditional definition of PrinterJob in CtrlUtil, which gets defined in MACOS even if virtualgui is enabled.

VirtualGUI based backends so far use the CtrlLib version of PrinterJob, except for Turtle.

So my suggestion (as I don't have write access to CtrlLib) would be adding a "#define VIRTUALGUI_NOPRINTERJOB 1" to Turtle/main.conf file and checking this condition in CtrlLib/CtrlUtil and other relevant places, using ifdefs.

Maybe Mirek or Klugier can check this...

Best regards,
Oblivion
