Hello Xemuth,

Good catch! It seems that in Draw/RescaleFilter.cpp - line 126 we have 3 DDUMP:

```
if(s.a != 255) {  
    DDUMP(s);  
    DDUMP(x);  
    DDUMP(y);  
}
```

The bad news is that this change is from 2020-07-07. It means that our source POSIX package is non build-able on RPI for a year. I would consider this as critical issue. It would be good to start building on RPI (ARM) Linux machine before release.
