Hi Mirek,

Ok, I downloaded latest nightly: upp-win-13784.7z, extracted and started it as before. No problem there.

Then I went to 'Select main package' dialog and right clicked the 'Assembly' panel. Furhter on, I selected 'Checkout and setup U++ SVN trunk sources..' and it indeed checked out SVN sources from svn://www.ultimatepp.org/upp -- not git. The SVN revision I get is 16039.

Where did I go wrong here?

Best regards,

Tom
