Needs BLITZ...

A catch: you have to add all used h-files to compile_commands.json explicitly.

If you send me compile_commands with h-files, I can fix that I think (I mean, add them during compile_commands generation).

Mirek

You can easily generate them by yourself. For example for umk:

```
umk uppsrc umk CLANG -j
```

In case this doesn't work for you I've attached one generated on my machine.

Then I do not understand "have to add explicitly"... :)

Mirek

When you compile a cpp-project, you compile only cpp/c files. h-files are compiled implicitly via #include directive.

In case of compile_commands.json you need to add them to compile_commands explicitly. Basically, you need to "compile" h-files as well.
