I am now experiencing two minor issues with wchar32 theide which I am not sure whether are related to wchar32 or perhaps some changes in windows:

- sometimes dropping the droplist (e.g. switching the build method) seems delayed or does not happen at all.
- After building, there is "Gathering files" progress; this should basically just check for changed files (by file stamps) and as far as I remember, was quick. Sometimes this now takes longer time than I would like, which does not really make sense at all (because those timestamps should be read from OS cache).

If you are running wchar32 theide, have seen these? (If not, I would appreciate you compiled and used it.)
