Tom1 wrote on Wed, 01 December 2021 14:02Hi Mirek,

It seems that occasionally the lower item list in Navigator Bar periodically re-adjusts its vertical position even while I'm dragging the 'elevator'.

I can stop this behavior by first clicking outside of the window on the desktop and then clicking back in the window. After this the 'elevator' works again normally.

Best regards,

Tom

I am really confused with this report :)

In any case, does not seem like this should be related to wchar32?
