Can you try Draw/FontCR.cpp:429

```
if(rface[1].Find(i) < 0 && !(fi & Font::SPECIAL) && (fi & Font::SCALEABLE)) {
```

to

```
if(rface[1].Find(i) < 0 && (fi & Font::SCALEABLE)) {
```

?

Explanation: By the time I was doing Linux code, I decided to exlude color fonts (I have reverted this decision for MacOS as there are no normal glyphs on MacOS, but never ported this decision back).
