After wrestling a bit with FreeType, colored emoji are now hopefully supported in Linux. (Please test).

The question now remains: When doing replacement, often some replacement font with black&white emoji glyph is closer in appearance than Color Emoji font. That results in mixing colored and B&W emojis. While technically probably more correct, should in case I am looking for emoji glyph always prioritize Noto Color Emoji (or maybe any color emoji font) over matching appearance of font?

Mirek
