Quote:Now for something much more fun:

```
CONSOLE_APP_MAIN
```

```
{  
  int x = 0;  
  CoDo([&] {  
    CoWork::FinLock();  
    x++;  
  });  
  DDUMP(x);  
}
```

What can you say about the number printed to the log?

Ideally it should be 1.

But in this case the result should (or expected to) be " $0 < x \leq \text{INT_MAX}$ ", depending on the underlying hardware/OS task/process scheduling?

Best regards,
Oblivion
