Lance wrote on Sun, 19 December 2021 14:311): Derive MyPanel from ImageCtrl to supply customized Paint and Key is the right thing to do, at the moment at least, unfortunately.

This is a big sentence. Are you saying that I could create a member fuction of MainWindos and call it throut a method of MainWindos
(like you did with WhenSuspiciousKey invoked inside the Key event of MainWindos) but I cannot attack directly WhenSuspiciousKey
to the Key event of ImageCtrl?
