Hi Klugier

I downloaded from [https://www.ultimatepp.org/www\\$uppweb\\$download\\$en-us.html](https://www.ultimatepp.org/www$uppweb$download$en-us.html)
I called it 'svn' because that is what UPP-homepage calls it.

So I should have called it 'latest nightly build' that does not compile

I dont want the whole upp dev-setup, just need to setup a upp-dev for linux,
thats why the tarballs are very handy (someone messed with the install scripts
and makes changes to my ~/.local/applications by adding .desktops and adds stuff
to ~/.cache - but I can fix that)
