I finished topic for CallbackArgTarget and CallbackProxy. Put them in one topic, and also added Mirek's explanation about gates.

There is error in CallbackProxy example. Instead of

```
a = b.Proxy();
```

should be

```
a = Proxy(b);
```

Thats it.

Mirek tell me am I going in right direction with this topic's I write. Are they good or bad, should I change something in my approach?

I think that I'm done with a callback topics. What do you think, what next stuff should I do, probably write more topics but what to start from here?

Ivica
