
Subject: Fit control to text

I would like to create a function like this

```
int res=RadioDialog  
("Select an option | Option 1 | Option 2 | Option 3")
```

Which should show a dialog with radio options (Option 1, 2 etc) and return user choice in res variable.

The problem for me is to get the size of the options text and therefore set the size of the dialog windows.

In other words: how can I fit a button (or any other widget with text inside) to its caption text.

Thanks in advance.
