---

Last month builds do not run with Win7-64.

Win says:

The procedure entry point ScriptFreeCache could not be located in the dynamic link library  
GDI32.dll

(attachment screenshot)

----

but upp-win-15947\_stable works without problems however

----

The problem is solved in the upp-win-16191.

With Win7-64 it works fine.
