Is it possible to specify the name of a real column that differs from the name of the Sqlld variable.

For example:

instead:

```
TIME_ (TIME)
```

(this code call compilation error, but real colomn name is TIME)

do like this:

```
TIME_ (LOCTIME).NAME(TIME)
```

or like this:

```
TIME__N (LOCTIME,TIME)
```

???
