Ahh yeah, I see what's going on. I'm using -std=c++2a for a later version of C++ which apparently doesn't require you to type in the template parameters. My bad for forgetting that not everyone is using later stuff.

If you don't want to have to do KeyValueRef<String, String> you can just use auto type deduction instead.

```
for(auto pair : ~kv) {
    out << Format("%s=%s\n", pair.key, pair.value);
}
```

Apparently that's been the case since C++17 and I just never stumbled on it. Technically in c++17 onward you can also do

```
VectorMap vm = GetIniKeys();
```

and it will auto-deduce the template parameters for you. Anyway: cheers!
