Hi Mirek,

Now I'm on the freshly installed Raspberry OS 64-bit, the same as I linked for you. Here the `./install` works for setting up the dependencies and starts compilation as expected.

However, the compilation fails with error:

```
./uppsrc/Core/Ops.h: In function 'Upp::byte Upp::addc64(Upp::uint64&, const uint64&, Upp::byte)':  
./uppsrc/Core/Ops.h:223:9: error: '_addcarry_u64' was not declared in this scope  
223 | return _addcarry_u64(carry, result, value, &result);
```

I do not know if there are more issues as the compilation stops to this error.

Best regards,

Tom
