guido wrote on Wed, 18 October 2006 01:51Mirek, another problem.

The print dialog stopped being populated at some point - even for old versions of upp, where it used to work. Upgrading to CUPS 1.2.4 might be the cause of breakage, but I'm not sure. I wager the cli interface of the cups tools has changed slightly

Please give me the printer control commands used, so I can try them in a terminal and report back.

Got it

The following item in the cups-1.2.4 changelog caught my attention:

- The command-line applications did not convert command-line strings to UTF-8 as needed (STR #1958)

adding LANG=C to the commands fixes upp printing for me:

```
"LANG=C lpoptions -l -d "
```

```
"LANG=C lpstat -p"
```

```
"LANG=C lpstat -d"
```

Don't know, if that's a proper fix or only a work-around character encoding issues.
