Subject: Re: Assist++ typedef struct analysis problem
Posted by Xemuth on Sun, 27 Mar 2022 02:20:01 GMT

Hello Lance, yes somes of my struct here wont compile.

About this bug. I digged Parser code in order to find a simple way to ignore C struct alias but didn't find a correct way to fix it.
However I have a temporary fix :

.\upp\uppsrc\CppBase\Parser.cpp : 1675

if(d.name.GetCount() && d.name != d.type) { // We want to prevent struct alias to be missinterpreted

It's wacky :d

Maybe I will dig it more tomorrow to understand the root cause of it and find a better way to fix it.
