
Subject: How do I deserialize grouped items into an array or map when they take this form? [solved]

How do I de/serialize something in the form of:

```
"whatever": {  
  "Item A": {  
    "member A": "whatever",  
    "member B": "whatever"  
  },  
  "Item B": {  
    "member A": "whatever",  
    "member B": "whatever"  
  },  
  ...  
}
```

when it's not in the form of an array/list, etc and the key isn't known ahead of time?

Map wants to create fields called key/value instead making "Item A", "Item B", ... keys and "member A", "member B" their values.

What's the appropriate structure to de/serialize this into?
