Hello Sayem,

You could try to experiment with our application logo. It was not changed for a while. So, if you could for example create 3D model in blender and then create icon basing on that model, it I would be grateful. All great icons sets (not simplified) was being made using 3D modeling applications.

You could try to replace this:

Here is tutorial about creating 2D icons in blender.

If you did well, we can talk about other icons or even logo :)
