mr_ped wrote on Mon, 06 June 2022 04:04You can also open the .upp file of the project and edit it directly, it's simple text file (I sometimes used that to reorganise the project).

But the drag'n'drop thing sounds like something people may try to do and would be nice if it would work? Can't think of any downside right now.

Manual edting is not what I want because I have to manually collect filenames (how?) and paste them into text editor. Drag & drop is the common easiest way on Windows platform.

I see that U++ team is focused on the framework itself (which is excellent), but they do not quite focus on tiny user-friendly IDE features.
